

# ANNOTATOR – POINTER TOOL

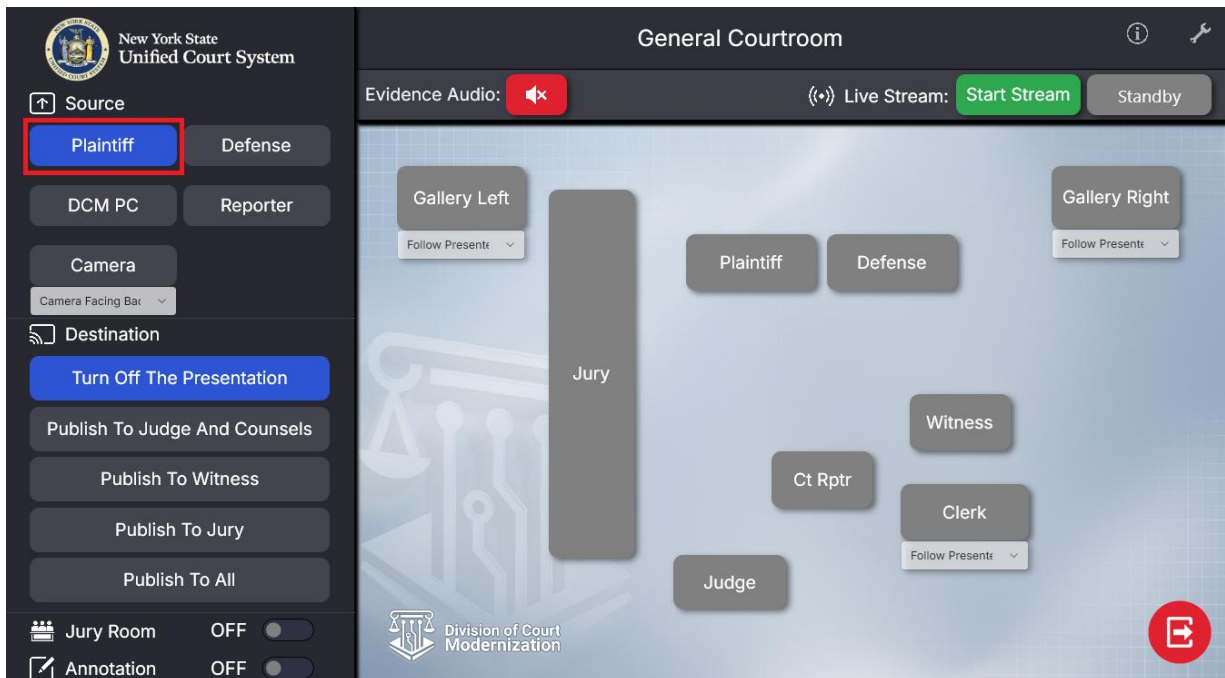

## User Guide

Last edited: 1/29/2026

To use the pointer tool in the annotator, you first need to enable the annotator function in the DCM control app.

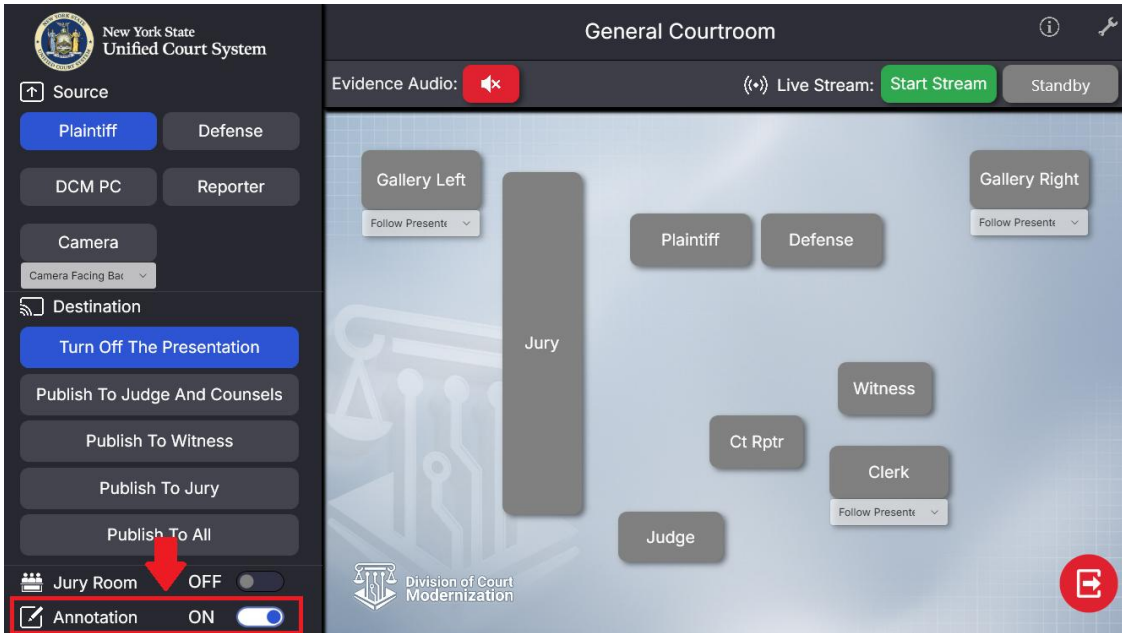

1. Open the “**DCM Control App**” icon by double-click on the app icon.
2. Select an option under the source where the evidence is presented that you want to annotate.

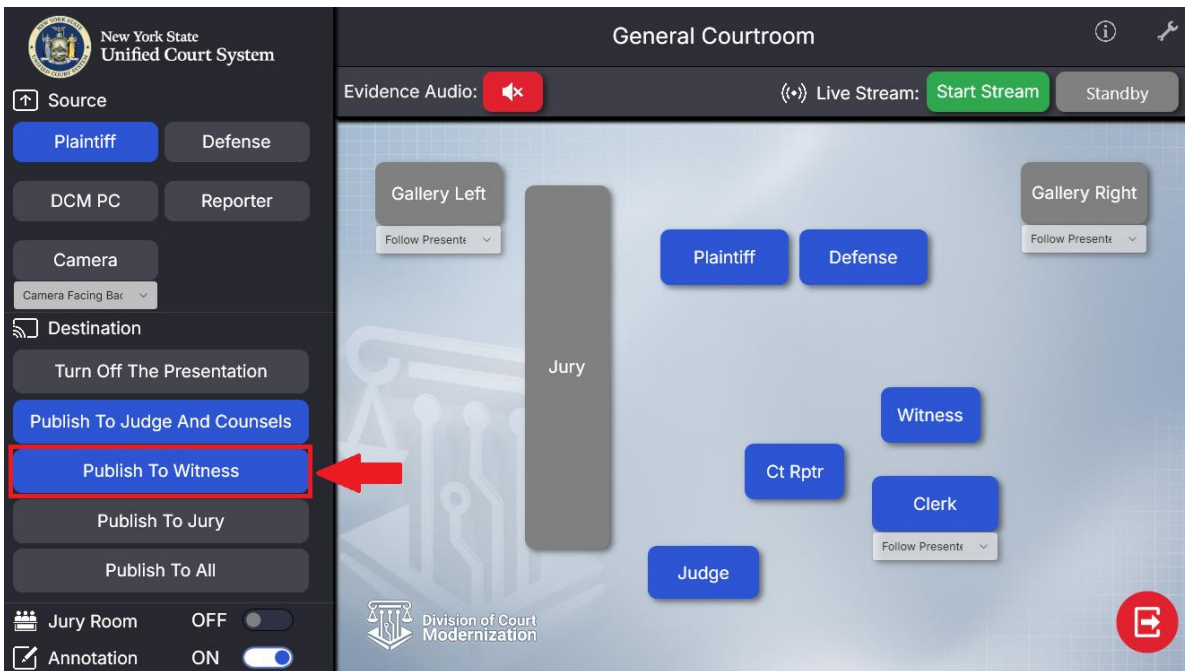

3. Click on the annotator toggle to enable the annotation functionality.

4. Select "Publish to Witness" to send the evidence to the Witness's monitor.

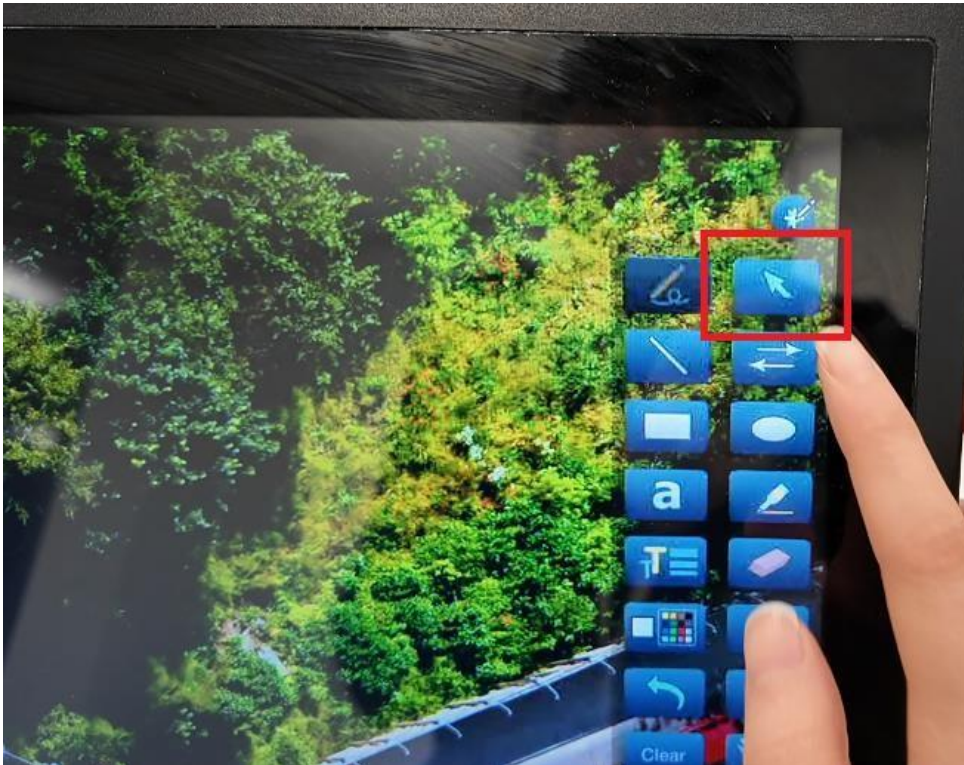

5. Once the evidence appears on the Witness monitor, tap the witness screen to reveal the hidden menu arrow in the top right corner.

6. Next, select the pointer button.

7. You can tap and drag the pointer on the screen.

8. To change the color of the pointer, go to the tools menu and select the color tool. You will have 16 color options to choose from.
